

Hydroponics Nutrient Solution Mixing Instructions

Container Size

- Use two 1 gallon (3785 mL) food-grade containers
 - I wash and reuse Harris 30% Vinegar Multi-Purpose Cleaner containers purchased from Home Depot
 - Fill each container approximately half full with hot (not boiling) water
-

Part A — MasterBlend + Epsom Salt

Ingredients

- MasterBlend 4-18-38: **910 grams**
- Epsom Salt (Magnesium Sulfate): **455 grams**

Instructions

1. Add both nutrients to the container labeled **Part A**
 2. Shake or stir until dissolved
 3. Fill with hot water to the 1 gallon mark
 4. Continue mixing until all nutrients are fully dissolved
 5. Verify no solids remain on the bottom of the container
-

Part B — Calcium Nitrate

Ingredients

- Calcium Nitrate: **910 grams**

Instructions

1. Add Calcium Nitrate to the container labeled **Part B**
 2. Shake or stir until dissolved
 3. Fill with hot water to the 1 gallon mark
 4. Continue mixing until fully dissolved
 5. Verify no solids remain on the bottom of the container
-

Mixing Precautions

- **Do NOT mix Part A and Part B concentrates together directly**
- Always dose Part A and Part B separately into the hydroponic system

- Shake or stir concentrate containers before each use
 - Store containers sealed in a cool location out of direct sunlight
-

Dosing Ratio

- Dose **10 mL of Part A** per gallon of fresh water added
- Dose **10 mL of Part B** per gallon of fresh water added

Target EC

- Recommended EC range: **1.8 to 2.0 mS/cm**
-

Maintenance Notes

- If algae begins growing inside the containers, excessive light exposure is likely occurring
- Discard contaminated solution and remix a fresh batch
- Replace nutrient solution if:
 - solution becomes cloudy
 - excessive settling occurs
 - contamination is suspected
